Building immunity in broilers: The influence of nutrition

Marisabel Caballero
Global Technical Management Poultry

Partners in Progress - Connect is a science-based webinar series, which enables the exchange of experience, knowledge and innovative ideas.

This webinar focuses on practical strategies to handle immunity in broiler production, as well as the science behind them. The discussion will range from parent stock nutrition, influencing the ability of broilers to thrive during their first days under commercial production, to combinations of nutrients and feed ingredients that can help with the prevention of undesired inflammation responses.

The webinar is hosted by Marisabel Caballero, our Global Technical Management Poultry, together with panelists Ajay Bhoyar, Global Technical Manager USA and Martín Roa, Regional Technical Manager, Mexico, with EW Nutrition. The webinar will take about 60 minutes and will offer a presentation on the topic, as well as, a chance to ask questions and get honest, insightful, and actionable answers.
